APCERA PLATFORM

Community Edition

Apcera Community Edition is the only cloud platform that lets developers and ITOps build a working compute cluster in as little as 15 minutes on a laptop, or in a small cloud computing environment. Apcera CE provides a production-ready environment for deploying small-scale applications, microservices and even large scale processing engines for jobs that are not time intensive or at a workgroup level.

View Requirements for Setup
Current Version: 2.0.3

APCERA [Developer]

Visit developer.apcera.com for more Community Edition resources including tutorials, FAQs and the peer support forum. Installation is as simple as the following steps:

1. Create SSH Key
2. Prepare installation environment
3. Accept Terms and Conditions
4. Domain name configuration
5. Configure HTTPS
6. Choose an infrastructure provider
7. Enter DNS servers
8. Create the platform!

You can also watch the installation video, and check out Apcera's comprehensive Features list
